# **Work History**

# Senior Frontend Developer

April 2022 - Present

# Autify, Inc., Japan

- Worked with Web, Mobile, Analytics and ML teams
  - Exposure to Selenium Webdriver and Appium
  - Exposure to visual regression testing pipeline
  - Experience with analytics tools
- Migrating from a Rails MPA to a React SPA
- Maintaining code quality through extensive reviews

Frontend: React, Redux, Apollo

Backend: Ruby on Rails, GraphQL, Postgres

QA: Jest, Testing Library, Mock Service Worker, RSpec, Autify

# **Full Stack Developer**

Oct 2019 - March 2022

# Rakuten, Inc., Japan

- Coordinated between 4 different departments with 20+ people to build an in-house analytics platform
  - Departments: Data Pipeline, Data Tracking, Data Consulting, Product Management
  - Main Features: Form Builder, Query Builder, Multiple timezone support
- Helped to maintain the CI/CD pipeline and support the transition to Kubernetes
- Took ownership of the logging architecture
- Mentored other developers and participated in productive code reviews
- Improving the QA process with automated testing
- · Migrated the codebase over to Typescript
- · Developed an ESLint plugin for GraphQL linting

#### Tech stack

Frontend: React, Redux, MaterialUI, Typescript, Tailwind Backend: node.js, GraphQL, hapi.js, MongoDB, Redis, RabbitMQ

Databases: Presto, Druid, Elasticsearch Scripting: Python 3, Jupyter Notebook

QA: Jest, Cypress, Testrail

Infrastructure: Jenkins, Docker, CloudFoundry, Kubernetes Software Development: JIRA, Confluence, Bitbucket

# Senior Software Engineer

Apr 2018 - Aug 2019

# Tectus Dreamlab, Singapore

- Solely maintaining a web app for Proceq, which produces tools for non-destructive testing (NDT)
  - Worked on chart visualizations with Highcharts, geo-analytics with Google Maps
  - Built an offline HTML-based report with jsdom
- · Collaborated on the Screening Eagle platform, a management tool for the construction industry
  - Constructed a dynamic form builder for issue tracking
  - Worked with PDF rendering with PSPDFKit and 3D rendering with three.js
- Spearheaded an integrated testing effort that brought bugs down to a near-zero level
- Integrated i18n into the web app
- Implemented a deployment pipeline for a one-click build

Frontend: React, redux, redux-saga, recompose, ant.design, stylus, storybook, Webpack 4, Flow

QA: Jest, Cypress, Sentry

Infrastructure: Gitlab CI, Jenkins pipelines, Docker, AWS

Software Development: Gitlab, JIRA

# Spacebib, Singapore

- Built the public-facing and internal admin site for a sporting events platform
- Collaborated with the backend for a seamless API integration
- Continuously collected and iterated on design feedback to improve usability
- Constantly monitoring integration tests and dashboard metrics to ensure site uptime

#### <u>Tech stack</u>

Frontend: React, Redux, MobX, Apollo, Bootstrap, SASS, JSPM, Webpack 2, Typescript

QA: Mocha, Selenium Webdriver, Webdriver.io, Browserstack Backend: CakePHP, GraphQL, Jenkins, Ubuntu 14.04, Linode

Software Development: Github

# **Full Stack Developer**

Jul 2012 - Apr 2014

# Pytheas Travel, Singapore

- Built a whitelabel CMS SaaS solution catering to 50+ travel agents
- Migrated 35K customers, 1K products and 5 clients to our CMS, preserving DNS and email functionality
- Automated the deployment of development and production servers with Puppet
- Built a proof-of-concept logging framework based on Elasticsearch

#### Tech stack

**Web:** Codeigniter 2, JQuery **QA:** PHPUnit, Selenium Grid

**DevOps:** postfix, Nginx, Jenkins, AWS, Puppet, CentOS6 **Software Development**: In-house SVN repository

## Web Developer

Mar 2012 - Jun 2012

# Doorstep Luxury, Singapore

- Developed a Wordpress e-commerce site for luxury goods, creating and modifying plugins as necessary
- Built a standalone web-based point-of-sale (POS) system to scan from a webcam and print receipts

# Web Developer

Dec 2011 - Feb 2012

KLIF Media, Singapore

• Built a prototype of a social media site on Symfony 2

# **Education**

# Bachelor of Arts (B. A.) Psychology

Aug 2008 - Jun 2011

National University of Singapore

• Electives in Programming and Linguistics

## Skills

#### Exposure to Other Languages/Frameworks

R, node.js, Angular 1, Elm, Rust, Go, React Native/Expo, Python 3/pandas, vue3, C#, C++, Ruby

#### Languages

English (Proficient), Chinese (Basic), Japanese (Rudimentary)

#### Certifications

Red Hat Certified System Administrator (RHCSA) Certification ID: 140-241-662

Algorithmic Toolbox by University of California, San Diego & Higher School of Economics on Coursera

Huggingface Audio Course Certificate of Excellence (xiankai123)

# **Meetup Talks**

#### Alternative Libraries for React - JSPM and MobX

https://engineers.sg/video/alternative-libraries-for-react-reactjs-singapore--900

#### Data-driven development with Flow

https://www.meetup.com/React-Singapore/events/240880621

# **Personal Projects**

## FFXIVFurigana (https://github.com/xiankai/FFXIVFurigana)

- A plugin to display furigana over Japanese in the chat log output

#### ChatHistory (https://github.com/xiankai/chat-history)

- A web project to import and display chat history from old messaging programs

#### Triple Triad V2 (https://github.com/xiankai/triple-triad-ai)

- An experiment with Rust to replicate the working logic of the card game

# YouFast (https://github.com/xiankai/youfast)

- An experiment with Rust to replicate the working logic of the card game

#### XIVAnalysis (https://github.com/xiankai/xivanalysis)

- Collaborating with other users to analyse combat performance in Final Fantasy XIV
- Using React, SemanticUI, CSS Modules

#### Pokémon Go Map (https://github.com/xiankai/sg-pokemongo-ex-raid-map)

- A local map to track and predict locations of popular EX-raids in Pokémon Go, serving 3k+ users
- Built with Typescript, MobX, Leaftlet and d3.js
- Designed to be replicated for other countries as well
- Auto-updated data from a google drive spreadsheet
- Implemented various mapping techniques like (S2 cells, point-in-polygon) to visualize map data
- Used Mapbox for map layers before switching to OpenStreetMap (OSM)

# Triple Triad (https://github.com/xiankai/triple-triad-solver)

- A multiplayer implementation of a mini-game in Final Fantasy XIV, using peerjs to polyfill WebRTC
- Using redux-observables/RxJS for state management

# Web Crawler (https://github.com/xiankai/Disney-Store)

- Crawled the Disney Store for product updates to notify up to 15 subscribers of new stock
- Used cURL to crawl pages, redis to store hourly data and Mailchimp to send notifications

#### **Discord bot** (https://github.com/xiankai/pusheen-the-fc-helper)

- Another web crawler to crawl ten thousands of pages using a job queue mechanism
- Used phantomis to crawl pages, redis to store data and node.is to host the chat bot interface

#### Server Administration

- Managed a few VPS to host various bots and websites for other people
- Migrated the server 6 times, alternating between Linode, AWS and Digital Ocean, using rsync, mysqldump and Puppet to quickly rebuild environments, preserve data, and maintain 100% uptime
